

Sprint 2 Plan - BMI Dashboard - Team Dash - October 16 - Revision 0-November 4

Goal:

Our goal is to connect the “pipeline”. We want to connect the parsed data to the database, and then take the data out of the database depending on a query. We would like to at least simulate the flow of true live data from acquisition to parsing to database to display.

Task listing, organize by user story:

- **Establish project functionality:** As a developer, I need to display data in a simple manner to the visitor. E
 - We will connect the parsed data to our database to create a working database that includes real and relevant data.
- **Viewing previous data** - As an exhibitor, I need to be able to see energy consumption of previous days so that I can compare different days. OP,K
 - We will query the database and bring that data to display.
- **Communicate with database-** As a developer I need to learn PHP/MySQL so that I can connect our database to our web interface, through the use of visualization tools. O, OP, A
 - We need to be able to communicate data from the database to our visualization tools.
- **Prepare for live-** As a developer I want to simulate live data from past data so that we are prepared to show true live data. E
 - We would like to simulate the scenario of acquiring live data with static data so that when we do work with true live data we will be prepared.
- **Live acquisition-** As a developer, I need to work on gathering live data from the building management system so that we can show true live data. K, S, J
 - With the true live data we want to complete the “pipeline.” This includes acquiring data to storing to displaying the data.

Team Roles:

Allen Liou: Product owner, Developer , Database Communication

Justin Barros: Developer, Parsing utility logs

Octavio Rodriguez: Developer, Database Communication

Oscar Pinedo: Scrum Master, Developer, Database Communication

Sterling Salvaterra: Developer, Parsing utility logs

Karthik Thota: Developer, Parsing utility logs, Database, Visualization

Initial Task Assignment:

Allen Liou: Communicate with database(ingest) and store data

Justin Barros: Parsing Data

Octavio Rodriguez: Communicate with database and store data

Oscar Pinedo: Constructed Database, Communicate with database(ingest)

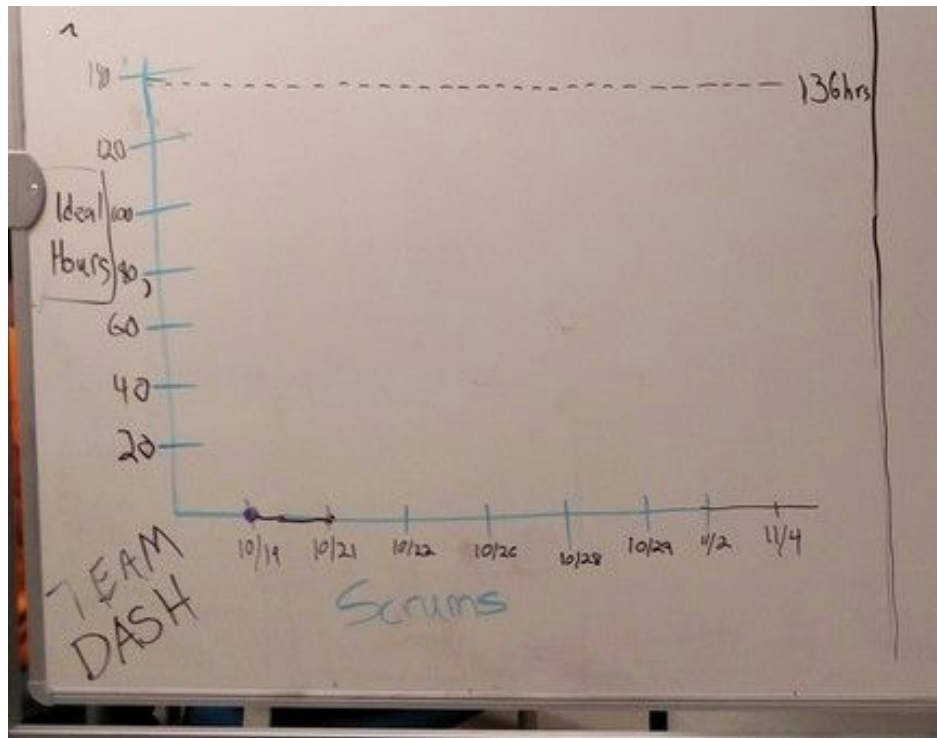

Sterling Salvaterra: Parsing Data

Karthik Thota: Parsing Data, Constructed Database

Initial Burn Up Charts:

(BEFORE SPRINT STARTED)

(UPDATED - AFTER SPRINT STARTED - No changes in between)

Initial Scrum Board:

Scrum Times:

Monday 7 p.m

Wednesday 7 p.m.

Thursday 8 p.m..
